

FortiClient

The Fortinet Unified Agent

Highlights

- ZTNA Agent
- SASE Agent
- Endpoint Protection (EPP)
- Vulnerability Assessment
- Security Fabric Agent
- VPN Agent
- Sandboxing
- CASB (inline and API)
- Centralized Management, Logging, Reporting
- Managed Services available

Unified Agent for Visibility and Control, Endpoint Protection, and Secure Remote Access using ZTNA Technologies

The FortiClient platform integration provides endpoint visibility, ensuring all Fortinet Security Fabric components have tracking and awareness, compliance enforcement, and reporting. These integrations reduce the number of agents deployed as FortiClient is the Unified Agent for Fortinet. Secure remote access to applications is delivered via ZTNA, CASB, or traditional virtual private network (VPN) tunnels. NextGen anti-malware and anti-exploit capabilities provide security and protection for endpoints when local or remote.

Features

Unified Endpoint features including compliance, protection, and secure access into a single modular lightweight client. FortiClient is the agent for VPN, ZTNA, and Security Fabric telemetry and is incorporated into FortiSASE, FortiNAC, and FortiPAM.

Universal ZTNA, with automatic, encrypted tunnels for controlled validated adaptive per-session access to applications based on device and user identity verification, near real-time continuous endpoint device security posture checks and granular application access policy regardless of location.

Advanced Threat Protection against exploits and advanced malware, powered by FortiGuard along with FortiSandbox integration.

Simplified Management and Policy Enforcement with FortiClient EMS, FortiClient Cloud, and FortiGate.

Available in

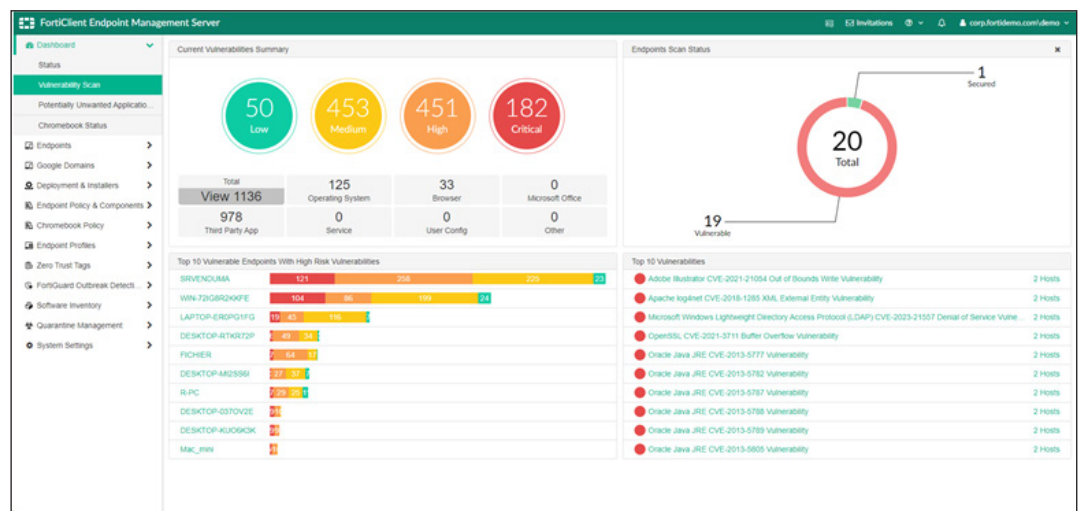

Virtual

Hosted

Central Management Tools Endpoint Management System (EMS)

- Simple and user-friendly UI
- Remote FortiClient deployment
- ZTNA orchestration
- Real-time dashboard
- Software inventory management
- Active Directory (AD) and Azure AD integration
- Central quarantine management
- Automatic group assignment
- Dynamic access control
- Automatic email alerts
- Supports custom groups
- Remote actions
- On-premise and cloud-based options
- Zero trust tagging rules

Vulnerability Dashboard

Benefits

Security Fabric Integration

FortiClient integrates endpoints into Fortinet's Security Fabric for early detection and prevention of advanced threats. This integration delivers native endpoint visibility, compliance control, vulnerability management, and automation. FortiOS and FortiAnalyzer leverage FortiClient endpoint telemetry intelligence to identify indicators of compromise. With the automation capability, administrators can investigate in real time and set policies to automate responses, including quarantining suspicious or compromised endpoints to contain incidents and stem outbreaks. Fortinet's endpoint compliance and vulnerability management features simplify the enforcement of enterprise security policies preventing endpoints from becoming easy attack targets.

Universal ZTNA

FortiClient Universal ZTNA works with FortiOS to enable secure granular access to applications no matter if the user is local or remote. Each session is initiated with an automatic, encrypted tunnel from FortiClient to the FortiOS ZTNA Application Gateway for user and device identity verification. In addition, FortiClient performs continuous near real-time endpoint posture checks that enables ZTNA application gateway to provide adaptive real-time access control based on dynamic endpoint posture validation. You can also use multi-factor authentication to provide an additional layer of security. With Universal ZTNA, organizations benefit from not only more secure and better remote access but in addition can offer consistent security and user experience for secure access to applications for on-prem and remote users regardless of endpoint location.

Unified Agent

FortiClient is the Fortinet Unified Agent platform, acting as that bit of code running on the laptop or mobile device that is needed for many cybersecurity products, thereby reducing 'agent sprawl'. In addition to the features and benefits of FortiClient itself, the FortiClient Agent can also provide support for FortiSASE, FortiNAC, FortiPAM, and FortiMontior. In the case of FortiSASE, a FortiSASE license includes FortiClient. FortiClient only loads the elements needed, so it remains as lightweight as possible.

Web Filtering and SaaS Control

FortiClient provides remote web and video filtering, delivering web security and content filtering. This function provides phishing and botnet protection as well as granular application traffic control including web-based applications, YouTube, and software as a service (SaaS).

Vulnerability Assessment

FortiClient can reduce the attack surface by scanning endpoints for vulnerabilities and sharing that information for appropriate action. Any vulnerabilities can be leveraged by firewall policies, by ZTNA policies, or could result in quarantining of the endpoint.

Benefits continued

Patch Policy Enforcement

Keeping endpoints up to date with the latest firmware can be difficult. FortiClient simplifies this task by managing endpoint patching, even when the endpoints are not on the network.

Malware and Exploit Prevention

By integrating with FortiClient Cloud Sandbox and leveraging FortiGuard global threat intelligence, FortiClient prevents advanced malware and vulnerabilities from being exploited. FortiClient integrates with FortiClient Cloud Sandbox to analyze all files downloaded to FortiClient endpoints in real time. Millions of FortiClient and FortiSandbox users worldwide share information about known and newly discovered malware with the cloud-based FortiGuard threat intelligence platform that eventually turns into usable threat intelligence.

Ransomware Protection

FortiClient contains behavior-based ransomware protection, with the ability to roll back changes made by malicious programs, putting the endpoint back to a preinfection state.

Flexible Licensing

FortiClient is available through either the traditional device-based licensing or user-based FortiTrust licensing. Both options offer the same functionality and allow customers to decide how they want to subscribe to the benefits of FortiClient. FortiFlex for MSSPs is also available for MSSPs to enable them to offer FortiClient to their customers on a subscription model.

VPN

FortiClient provides flexible options for VPN connectivity. The split tunneling feature enables remote users on VPNs to access the Internet without their traffic having to pass through the corporate VPN headend, as in a typical VPN tunnel. This feature reduces latency, which improves user experience. At the same time, FortiClient includes protections to ensure that Internet-based transactions cannot backflow into the VPN connection and jeopardize the corporate network.

In addition to simple remote connectivity, FortiClient simplifies the remote user experience with features such as autoconnect and always-on VPN, as well as dynamic VPN gate selection. You can also use multifactor authentication to provide an additional layer of security. Having VPN and ZTNA with the same agent simplifies and de-risks the transition to ZTNA.

FortiGuard Security Services
www.fortiguards.com

FortiCare Worldwide 24/7 Support
support.fortinet.com

FortiClient Managed Services include: cloud provisioning, onboarding, vulnerability monitoring, setup and integration.

FortiClient Services

FortiClient Managed Services

To assist and offload busy IT teams, Fortinet is offering FortiClient Managed services to streamline the configuration, deployment, and monitoring of FortiClient agents. Services included with this offering include the following activities.

Initial FortiClient Cloud Provisioning

The managed services team works with customers to set up and configure their FortiClient Cloud environment for the following capabilities:

- Endpoint groups setup
- ZTNA
- VPN
- Anti-ransomware and malware protection
- Vulnerability management
- Security profiles and policies configuration
- Endpoint posture check rules
- Custom FortiClient installer creation and ongoing installer updates

Endpoint Onboarding

The managed services team creates custom FortiClient installers for customer-specific use cases, sends invitation emails to users, and onboards them for FortiClient Cloud management and provisioning.

Security Fabric Setup and Integration

The managed services team integrates FortiClient Cloud with the Fortinet Security Fabric to support use cases such as ZTNA, incident response, and automation.

Endpoint Vulnerability Monitoring

The managed services team monitors customer endpoints to identify high-risk endpoints and alert them of endpoints with critical and high vulnerabilities that would be easy targets for cyber attacks. The managed services team detects, reports, and guides customers to remediate those vulnerable endpoints.

Additional Services

Access global knowledge of Fortinet customer best practices.

Best Practice Service (BPS)

FortiClient Best Practices Service is an account-based annual subscription providing access to a specialized team that delivers remote guidance on deployment, upgrades, and operations. The service allows customers to share information about their deployment, user requirements, resources, and other related items. Based on the information provided, the BPS experts can provide recommended best practices, sample code, links to tools, and other materials or assistance to speed adoption and guide the customer towards best practice deployments. The team does not log into customer devices to make changes for them. This approach is a consulting and guidance service which may include sample configurations or playbooks. This approach is not an on-site professional services offer.

Extend your IT team with skilled FortiClient specialists.

FortiClient Forensics Analysis Service

FortiClient Forensic Service provides analysis from remote FortiGuard Labs experts to help endpoint customers respond to and recover from cyber incidents. For each engagement, forensic analysts from Fortinet's FortiGuard Labs will assist in the collection, examination, and presentation of digital evidence, including a final, detailed report. FortiClient subscriptions that include Forensic Services entitle the customer to call on these endpoint forensic experts whenever an event happens, offloading internal teams and accelerating investigations by analysts deeply familiar with the tools of endpoint security. Forensics Analysis Service is an annual subscription, not a per-incident license.

Provide visibility, compliance, data security and threat protection.

Fortinet CASB Service

To safely embrace the cloud, a Cloud Access Security Broker (CASB) can act as a gatekeeper by providing visibility, control, and protection to allow organizations to extend their security policies beyond their own infrastructure. CASB sits between cloud service users and secures SaaS cloud applications, monitors all activity, and enforces security policies. Fortinet's dual mode solution provides security, scalability, and performance using both inline and API-based CASB protections to address all cloud security needs. A FortiClient license enables inline CASB services on a FortiGate and provides a license for FortiCASB, Fortinet's API-based CASB service.

Feature Highlights

Central management tools provide the ability to centrally manage Windows, macOS, Linux, Chrome, iOS, and Android endpoints. FortiClient EMS provides on-premise management and FortiClient Cloud provides cloud-based management.

Central Management Tools

Software Inventory Management provides visibility into installed software applications and license management to improve security hygiene. You can use inventory information to detect and remove unnecessary or outdated applications that might have vulnerabilities to reduce your attack surface.

Windows AD Integration helps sync organizations' AD structure into the central management tools so that you use the same organizational units from your AD server for simplified endpoint management.

Real-time Endpoint Status always provides current information on endpoint activity and security events.

Vulnerability Dashboard helps manage organizations attack surface. All vulnerable endpoints are easily identified for administrative action.

Centralized FortiClient Deployment and Provisioning that allows administrators to remotely deploy endpoint software and perform controlled upgrades. Makes deploying FortiClient configuration to thousands of clients an effortless task with a click of a button.

FortiSandbox integrations assist with configuration and suspicious file analysis. Sandbox settings are synchronized across managed endpoints, simplifying setup. A detailed analysis of FortiClient submitted files is available in the central management tools. Administrators can see all the behavior activity of a file, including graphic visualization of the full process tree.

FortiGate provides awareness and control over all your endpoints.

FortiGate Integrations

Telemetry provides real-time endpoint visibility (including user avatar) on FortiGate console so administrators can get a comprehensive view of the whole network. Telemetry also ensures that all fabric components have a unified view of the endpoints.

Dynamic Access Control for Compliance Enforcement requires EMS to create virtual groups based on endpoint security posture. These virtual groups are then retrieved by FortiGate and used in firewall policy for dynamic access control. Dynamic groups help automate and simplify compliance to security policies.

Endpoint Quarantine helps to quickly disconnect a compromised endpoint from the network and stop it from infecting other assets.

Automated Response helps detect and isolate suspicious or compromised endpoints without manual intervention.

Application-Based Split Tunnel supports source application-based split tunnel, where you can specify application traffic to exclude from the VPN tunnel, such as high bandwidth apps.

Web Filtering with Keyword Search / YouTube Filters blocks web pages containing words or patterns that you specify as well as limit users' access by blocking or only allowing specified YouTube channels.

Feature Highlights continued

FortiSASE Integrations

The FortiSASE license includes a license for FortiClient, which is the endpoint agent for the FortiSASE solution.

Endpoint management is handled by an EMS instance within FortiSASE so that all the FortiClients associated with FortiSASE are properly registered and managed.

Automatic encrypted tunnels are created between FortiClient and the FortiSASE Points of Presence (PoPs).

Vulnerability assessments conducted by FortiClient are passed to FortiSASE for evaluation as part of ZTNA application access controls.

Endpoint Protection (EPP) is included with the FortiClient license, providing more protection for laptops and mobile phones.

1. Requires EMS or FortiClient Cloud to centrally manage FortiClient.

2. Also compatible with Chrome OS.

3. Requires FortiAnalyzer.

4. Also compatible with Windows mobile.

5. Free Android SSL VPN Client available in Google Play Store.

The above list is based on the latest OS for each platform.

FORTICLIENT

Supported Operating Systems
Microsoft Windows 7 (32-bit and 64-bit)
Microsoft Windows 8, 8.1 (32-bit and 64-bit)
Microsoft Windows 10 (32-bit and 64-bit)
Microsoft Windows 11 (64-bit)
Microsoft Windows Server 2012 or later
macOS 10.14 or later
iOS 9.0 or later
Android 5.0 or later
Linux Ubuntu 16.04 and later, Red Hat 7.4 and later, CentOS 7.4 and later with KDE or GNOME
All Chromebook versions
Authentication Options
RADIUS, LDAP, local database, xAuth, TACACS+, digital certificate (X509 format), FortiToken
Connection Options
Autoconnect VPN before Windows logon
IKE mode configuration for FortiClient IPsec VPN tunnel

FORTICLIENT EMS

Supported Operating Systems
Microsoft Windows Server 2012 or later and Ubuntu 22.04 Desktop and Server
Endpoint Requirement
FortiClient 6.4 or later, FortiClient for Windows and macOS X, 6.4 for iOS and Android
System Requirements
2.0 GHz 64-bit processor, six virtual CPUs, 8 GB RAM, 40 GB free hard disk, Gigabit (10/100/1000BaseT)
Ethernet adapter, Internet access

Order Information
